# VIALLI Gmbh München Germany Pipes \& Fittings 

VIALLI, a renowned German brand specializing in plastic piping systems, is proudly manufactured by VIALLI GmbhMünchen Germany. With over 15 years of experience, we have consistently delivered top-quality products utilizing cutting-edge German technology that adheres to DIN Standards, utilizing only the highest quality materials.

Our commitment to excellence extends beyond borders as we export our products to Europe, various parts of Asia, and the Middle East. Our overarching vision is to broaden our reach and make this exceptional product accessible to as many regions as possible.

## Our comprehensive range of products includes:

VIALLI PP-Rc Pipes \& Fittings, meticulously crafted in accordance with German DIN 8077 and DIN 8078 Standards. Our lineup includes PP-RcStabi pipes with an aluminum layer and PP-Rc Fiberglass Composite Pipes.

VIALLI PP-RCT Pipes \& Fittings, similar to our standard PP-Rc offerings, our PP-RCT Pipes and Fittings meet the stringent requirements of German DIN 8077 and DIN 8078 Standards. This range also encompasses PP-RcStabi pipes with an aluminum layer and PP-Rc Fiberglass Composite Pipes.

VIALLI PEXa pipe \& fittings products are engineered to meet the rigorous German standards of DIN 16892 and DIN 16893, ensuring the required Cross-link Degree for optimal performance.

At VIALLI, we prioritize the highest hygienic and quality standards. For more details and to explore our complete product catalogue, make sure to visit our website. Your satisfaction is our priority, and we look forward to serving you with excellence.

All of our products have undergone rigorous testing to ensure they meet the stringent Hygienic and Quality Test Requirements recommended by WRAS.

## SYSTEM CHARACTERISTICS AND BENEFITS

1. Plastic piping for interior hot and cold water distribution systems in buildings, floor
\& Central Heating Systems.
2. Meeting all health requirements
3. No corrosion and / or encrustation
4. Exceptionally long service life while preserving high utility value
5. Trouble- Free operations with less noise
6. Less friction losses than with traditional materials
7. Less weight compared to traditional materials
8. Quick, easy and clean installation works
9. Resistance in aggressive environments.

## ENVIRONMENTAL ASPECTS

Fully recyclable product; neither toxic nor otherwise harmful substances are used in its manufacture and/ or application.

## INTENDED USE

It is intended for interior hot and cold water distribution systems in buildings and floor \& central heating systems:
PN 10-cold water distribution and floor heating systems
PN 16-Higher Pressure cold water distribution and DHW Systems at lower Pressures
PN 20- Hot water distribution systems, Central Heating
PN 25- Hot water distribution systems, Central Heating

## TECHNICAL SPECIFICATIONS

Material - statistical polypropylene copolymer (random - copolymer) for injection molding and extrusion processes with excellent welding ability; nickel - plated brass fittings
Manufacturing process - pipes are produced by extrusion, while fittings by injection molding
Shapes - pipe lengths 4 Meter
Assembly / Fixing - the product range covers all needs for interior water distribution systems and heating system routes

Transitions for other pipe material - implemented by threaded connection (i.e. by combined couplings) or flange connections.

Coupling - standard method is poly fusion welding or by electro fitting
Surface finish - elements are in green color without any finish, Separate metal element brass, alternatively, nickel plated, black identification printing on the surface.

## PHYSIC CHEMICAL PROPERTIES

Density $-0.9 \mathrm{Kg} / \mathrm{m}^{3}$
Thermal expansion coefficient- for VIALLI PP-Rc pipes $0.15 \mathrm{~mm} / \mathrm{Mk}$
Thermal conductivity - $0.22 \mathrm{~W} / \mathrm{Mk}$, fire rating -Class C3
Resistance against Chemicals - PP-Rc piping systems are intended mainly for water distribution (drinking, cold, hot, irrigation, etc.) - it is also possible to use the system for other media, in which in case their concrete use is governed by DIN $8078 \mathrm{Bb}-1$ possible to consult the manufacturer.

## LABORATORY OPERATION \& TEST DEVISSES

## 1. MFI (Melt Flow Index) Test Device:

This device is used in simulating the material's flow behavior before being processed in the extruder. This device gives us information regarding the flow rate of the material in the unit temperature and time, this helps us to have information on the possible behavior of the material in the extruder. The quality Standard for this test is ISO 1133.

## 2. Precise Balance:

Using this balance, the weight of the material which was passed from MFI device is determined according to standard ISO 1183 separately in the air and in the liquid whose density is known. After having these weight figures, the material's density is determined by using the specific density formula.

## 3. IZOD-Charpy test Device:

With this device, the amount of the energy absorption and the possible applicable force on the unit area are determined by using free falling method using materials having different weights. By doing this test, we obtain information regarding material's behavior at the different loads with sudden impacts. The standards applied for this test are TS 1004, TS 1005, ISO 179 and ISO 180.

## 4. Pulling - Pressing Test Device:

Using this device, we obtain information's about the maximum load strength, elasticity module (the maximum force strength per unit area) maximum tension. Elongation in percentage, deformation, elongation at break point, tension at break point etc. of the product. By means of these test we can make forecasts on the possible behavior of the material in the working conditions. In these test ISO R 527 standard is applied.

## 5. Hallow Die Punch (sampling Device):

This device is used for the preparation of the sample which will be tested in the pulling test device. The sample is prepared in accordance with Standard No. ISO 527

## 6. Shore (Hardness Device):

This device is used to determine the material's Hardness. When we apply load on the sample, if the material is too soft then it will be pressed like paper, while if it is too hard then deformation will occur. For this reason, the hardness value of the product must be within the range of the values mention in the Standard No. DIN 53505.

## 7. Microtome Device:

This is a device used to cut small pieces which can be monitored under microscope for the purpose of inspecting the infrastructure of the material.

## 8. Microscope Image System:

This is a system used for monitoring the fibrous structure of the material. The aim of this test is to ensure that the material has a homogeneous infrastructure. If the fibrous image is not consistent, it indicates that there may be an issue either in the production stage or with the quality of the raw material itself.

## 9. Furnace-Deep Freezer:

These devices are used for rapid cooling or heating through shock testing. At specific intervals of time, an impact test is applied to the material held in the furnace or deep freezer, and its behavior is monitored at different test temperatures.

## 10. Furnace:

This device is used for thermal strength testing. The purpose of this test is to monitor whether the length of the material exceeds more than $3 \%$ when subjected to a specific temperature for a certain period. This test is important because at considerably higher temperatures, the material expands and elongates, while at lower temperatures, it contracts. However, after exposure to higher or lower temperatures, the material does not fully return to its normal size at normal temperatures. This characteristic leads to a change from a round shape to an oval shape in a closed pipe system. The standard applied for this test is TS 5450.

## 11. Pressure Test:

For the pipes produced according to the standard TS 5439, to monitor the strength of the pipes when subjected to pressure, a pressure test is administered under 100 h (at $20^{\circ} \mathrm{C}$ ), and 165 and 1000 h (at $80^{\circ} \mathrm{C}$ ). the standards used for this test are ISO 4427 (for PE 100), ISO 4437 (for 80) and TSE 10827.

## 12. Momentum Strength Test:

In addition to the leak test,a strength test is applied with the aim of testing the harmonical work of the metal fittings with plastic. In order to be able to apply a $95{ }^{\circ} \mathrm{C}$ temperature to the pipe it must resist 10 Bar pressure for short time test.

## Consistency Properties

## Consistency Properties PN 20

From the requirements of the temperature/pressure ratio in accordance with DIN 1988 T2 and the long term durability properties in accordance with DIN 16962 and DVS 2207, the Green pipes with a pressure degree PN20 meets the specified safety correction value of Safety Factor $=1.5$
in accordance with DIN 1988 T2, the following requirements are stipulated as regards service on drinking water pipe systems.

Table 2: shows the admissible operation pressure depending on the temperature with a maximum number of years of operation for the transfer of water.

|  | Operational <br> Excess <br> pressure bar | Temp ${ }^{\circ} \mathbf{C}$ | Hours <br> p.a h |
| :---: | :---: | :---: | :---: |
| Cold <br> water | 0 to 10 <br> Fluctuating | To 25 | 8760 |
| Hot <br> Water | Fluctuating to 10 | Up 60 <br> Up to 85 | 8760 <br> 50 |

Table 1: operation requirements for pipes

| Temp. $\left({ }^{\circ} \mathrm{C}\right.$ ) | Max. OP. <br> (years) | Adm. <br> Pressure |
| :---: | :---: | :---: |
| 10 | 50 | 29.3 |
| 20 | 50 | 25.9 |
| 30 | 50 | 22.1 |
| 40 | 50 | 18.4 |
| 50 | 50 | 14.7 |
| 60 | 50 | 10.9 |
| 70 | 50 | 8.0 |
| 80 | 50 | 6.5 |
| 95 | 50 | 5.2 |

Table2:Adminisible operational pressure

## Consistency properties PN25

With regard to the demands of the temperature/pressure ratio in accordance with DIN 1988 T2 and long-term durability properties in accordance with DIN 16962 \& DVS 2207. The VIALLI pipe with pressure degree PN25 meets the specified safety correction value of safety Factor=1.5

Table 4: demonstrates the admissible operation pressure depending on the temperature for the flow media, taking into account a maximum number of years of operation.

|  | Operational <br> Excess <br> pressure bar | Temp ${ }^{\circ} \mathbf{C}$ | Hours <br> p.a h |
| :---: | :---: | :---: | :---: |
| Cold <br> water | 0 to 10 <br> Fluctuating | To 25 | 8760 |
| Hot <br> Water | 0 to 10 <br> Fluctuating | Up 60 <br> Up to 85 | 8030 <br> 730 |

Table 3: Operation requirements for pipes

| Temp. $\left({ }^{\circ} \mathrm{C}\right)$ | Max. OP. <br> (years) | Adm. <br> Pressure |
| :---: | :---: | :---: |
| 10 | 50 | 36.7 |
| 20 | 50 | 32.3 |
| 30 | 50 | 27.7 |
| 40 | 50 | 23.0 |
| 50 | 50 | 18.3 |

| 70 | 50 | 10.0 |
| 80 | 50 | 8.1 |
| 95 | 50 | 6.5 |

Table4:Adminisible operational pressure

Behavior Under Long Term Stress

Service Life in Hours
Termination of an isotherm indicates maximum service life also at lower tension.

## Linear expansion

The following items need to be taken into consideration when calculating modifications in length

* Ambient and materials temperature upon installation
* Temperature difference between lowest and highest pipe wall temperatures
* Expansion coefficient

Below the formula for the calculation of length alteration:

$$
\Delta L=\alpha \times L \times \Delta T
$$

## Expansion

$\Delta \mathrm{L}=$ length alternation in mm
$\alpha=$ Expansion coefficient in $\mathrm{K}^{-1}$
polypropylene pipes $\alpha=0.15$
prostab AL/PPR composite
pipes $\alpha=0.05$
$\mathrm{L}=$ pipe length in mm
$\Delta T=$ Difference in temperature in $K$

## Example

| Pipe | Temperature range |  |
| :---: | :---: | :---: |
|  | Pipe wall temperature | $60^{\circ} \mathrm{C}$ |
|  | Temp. at installation | $15^{\circ} \mathrm{C}$ |
|  | Difference in temp. | 45 K |

$$
\Delta \mathrm{L}_{2}=0.15 .6 .45=40.5 \mathrm{~mm}
$$

The alteration of length may be compensated by means of extensions loops, bending legs, extension bows or appropriate adapters.

FP = Fixing Point
LS = length of bending Pipe
SP = Sliding Point
$\Delta L=\Delta L_{1}+\Delta L_{2}$
The minimum length of the bending leg results from:
$\mathrm{L}_{\mathrm{s}}=\mathrm{K} \cdot \sqrt{ } \mathrm{d} \cdot \Delta \mathrm{L}$

## Expansion:

$\mathrm{L}_{\mathrm{s}}$ = length of bending leg in mm
$\mathrm{K}=$ Constant depending on material
( K value for $\mathrm{PP}=15$ )
$\mathrm{d}=$ pipe diameter in mm
$\Delta=$ Elongation in mm , calculated by equation $\Delta \mathrm{L}=\alpha . \mathrm{L} . \Delta \mathrm{T}$
Example of graphic and mathematical determination of bending

## 4. Bearing Distance / Fixed reference point Version

## Bearing Distance

Arrangement of Fix points for Horizontal piping
Bearing Distance for VIALLI pipe to PN20 - PN25

## Fixed Piont Version

A fix point is established by welding sleeves or other molded parts on either side of the pipe clip. Fixed points to be arrange in a line need to be so selected that alterations in direction in the pipe route are exploited.

## Drop in pressure Owing to pipe Friction

Pressure drops owing to pipe friction and calculated flow speed depending on peak flow for all pipes of the VIALLI installation system

Following charts of pressure drops resulting from pipe friction were established in analogy to DIN 1988, Section 3

Starting Values:

* Reference Temperature $10^{\circ} \mathrm{C}$
* Reference pressure 10 bar
* Absolute roughness of interior pipe wall $\mathrm{K}=0.007 \mathrm{~mm}$

Calculation of pipe friction coefficient according to Colebrook White)

## Note:

Pressure losses resulting from pipe friction change only insignificantly in the operating temperature range (up to $60^{\circ} \mathrm{C}$ ) of Domestic Cold \& Hot water supply system, therefore it is customary for the house installation to calculate with an overall supply pipes reference temperature of $10^{\circ} \mathrm{C}$ (DIN 1988)

The Legal unit used (SI unit) for pressure is the Pa (Pascal) Value, However, DIN standards refers to bar unit or mbar, respectively. Should the loss in pressure required in practice be the Pascal Value, the Following ratio will apply: $1 \mathrm{mbar}=100 \mathrm{~Pa}$.

Intermediate values not indicated in the tables may be interring polated. It should be noted, however, that no liner functions serve as basis

Losses in pressure of the Prostab pipes may be seen from the tables of nominal pressure degree PN20 \&PN25 as the inner pipes have the same Dimensions.

## Pressure drops owing to pipe friction ( R ) and calculated flow Speed (V) depending on peak flow ( $\mathrm{V}_{\mathrm{s}}$ )

Polypropylene pipes
Type3 in acc. With DIN 8077, nominal pressure Degree PN16

## 6. Determination of Total Pressure loss of the installation

\% The calculations of flow rates of the individual take-off points are summed in a direction and are assigned to the corresponding pipe sections as cumulative flow rates.

* The dimensions are calculated from the sum of continuous flow rates and peak rates.
* The continuous flow rates is regarded as the quality which emerges when water is removed for more than 15 minutes, converted to liter per second.
* Values for the conversion of cumulative flow rates in to peak flow rates are shown in diagram.
* In association with international pipe diameter. The peak flow rates determine the pressure gradient due to pipe friction.
* The total pressure loss of the pipe (without equipment resistance)is the sum of the pressure losses due to pipe friction and individual resistance.
\% The coefficients of resistance of pipeline sections and individual resistance are shown in table
The total pressure loss of the pipe can be determined with the aid of the relevant equation:

$$
\begin{array}{r}
\Delta P=\Sigma(R \times L+Z) \\
Z=S \cdot \frac{V^{2} \cdot e}{2}
\end{array}
$$

## Peak Flow

Peak flow $\mathrm{V}_{\mathrm{s}}$ depending on summation flow $\Sigma \mathrm{V}_{\mathrm{R}}$

## 8. QUALITY CONSIDERATIONS

The deciding factor in the VIALLI PP-Rc pipes and fittings manufacturing process is the use of correct/ pure raw materials.

* Pipes and pipe fittings consist of long-lasting PP-Rc material properties and characteristics.
* Has a direct impact on the welding quality (example: the melting point of PP-Rc material is $140^{\circ} \mathrm{C}$ that of PP-B material is about $160^{\circ} \mathrm{C}$ ) welding conditions become different so that the welding quality is easy to grasp. This is because two kinds of crystalline materials used in the PP blend mix have varying melting degrees.
* The cooling rate is different in the welding process due to the different shrinkage rates which leads to stress concentration.
* When the raw material is mixed with a number of recycling industrial waste plastic granulates, the pipes and fittings produced could be toxic and thus not suitable for long-term use to transport drinking water this will seriously damage people's health.
* During the welding process, there is an odor and an emission of black smoke.
* The lifespan of such pipes and fittings is rather short. Leakage problems will probably start within the first few months of regular use. The repair and replacement costs, especially in occupied residential units, will be much higher.

The production machines also play an important role in ensuring a quality product. Lowquality suppliers tend to use inexpensive equipment for their manufacturing process. For example, pipes may be produced with uneven wall thickness throughout the pipe. This can significantly impact the quality of the pipe and its chemical/thermal characteristics.

## 9. FREQUENTLY ASKED QUESTIONS

## Q: Which is the raw material used to produce VIALLI PP-Rc Pipe system?

#### Abstract

ANSWER PP-Rc pipe systems are produced from a type of polypropylene known as polypropylene random copolymer, often referred to as Type III PP-Rc (commonly known as PPR). This raw material is obtained through the cracking of petroleum, where propane-monomer polymerizes with polypropylene co-monomer to form polypropylene random copolymer. We exclusively utilize one of the best PP-Rc raw materials globally, approved for the production of pipes and fittings in accordance with DIN 8078 and DIN 16962 standards.

## Q: How are the pipes and Fittings manufactured using this raw material?

The PP-Rc raw material is a thermoplastic resin supplied in pre-colored granules. This raw material is transformed into finished products by raising the temperature, which plasticizes the material. This process allows the production of pipes through extrusion and fittings through molding.

## Q: What do PP-Rc type 1 Type, Type 2 and Type 3 refer to? What are the difference between them?

Plastic pipes have become more resistant as they have evolved. The first produced polypropylene had a structure consisting of propylene molecules, which was referred to as Type 1 Polypropylene homo-polymer. Later, propylene molecules with mixed sequences were introduced alongside the propylene molecules, leading to what is known as Type 2 Polypropylene block copolymer. Subsequently, the Type 3 product was developed, which includes ethylene molecules regularly sequenced among the propylene molecules.

Today, due to their specific characteristics, Type 2 and Type 3 are widely used. Type 2 is employed primarily in cold water networks and is not suitable for use with hot fluids. On the other hand, Type 3 can be used for hot water systems because it offers resistance to hot fluids.

## Q: Are VIALLI pipes UV resistant?

VIALLI PP-Rc pipes and fittings possess adequate UV stability to protect them from UV rays. Nevertheless, it is not advisable to continuously expose these pipes and fittings to direct sunlight for outdoor pipeline installations. It is recommended to apply an acrylic paint coating to the pipes or to shield them from direct sunlight by providing a protective covering or installing them in a duct. This precaution helps extend the lifespan and maintain the performance of the pipes and fittings when used outdoors.

## Q: Is insulation necessary for hot water applications?

Normally, it is not mandatory for plumbers to install insulation because the thermal conductivity of PP-Rc piping systems is lower compared to metal piping systems ( 0.24 $\mathrm{W} / \mathrm{mK}$ ). However, for centralized heating systems, where preventing heat loss and isolating pipelines from other utilities is important, it is advisable to insulate these lines. The required thickness of insulation is significantly lower compared to conventional lines due to the inherent properties of PP-Rc piping systems.

## Q: How can we connect VIALLI products to other metal systems?

VIALLI PP-Rc system can be connected to other metal systems easily by a flange or a metal adaptor. (BS 6920)

## Q: What is DIN Standards?

The Deutsches Institutfür Normung (DIN) is Germany's institute for standardization. It is a technical and scientific association recognized by the German government as the national standards body representing Germany's interests at international and European levels. DIN provides a forum in which representatives from manufacturing industries, consumer organizations, commerce, the trades, service industries, science and technical inspectorates, and government can discuss and define their specific standardization requirements, recording the results as German Standards.

## Q: What are production standards of VIALLI PP-Rc ?

Following standards are used for the production of VIALLI pipes and fittings:

Standard
DIN 8076
DIN 8077
DIN 8078
DIN 16962
DIN 1988
DIN 16928
DIN 2999
EN ISO 15874

BS 6700 Supplying Water for Domestic use with in buildings and their Cartilages
DVS 2207 Welding of Thermoplastics
DVS 2208 Welding Machines and Devices for Thermoplastics

## Q: What is the service life (life span) of VIALLI PP-Rc piping systems for different pressure groups?

PP-RC pipes have a service life of 50 years according to DIN Standards for in house applications. To have detailed information for Different temperatures and pressure rates, please refer product catalogue

## Q: Are VIALLI PP-Rc pipes used for drinking water? Are they Hygienic/

Healthy?

PP-Rc products can safely be used for Drinking water. VAILLI PP-Rc products have got all international Approvals as well as the approvals of the sales territories

## Q: What does PN Stands for and what does it mean to be PN-16 or PN20?

PN stands for Nominal Pressure, it is numerical designation used for reference purpose related to mechanical characteristics of the component of a piping system. A PN-20 pipe mean the pipe can withstand pressure Up to 20 Bars.

## Q: Why is VIALLI fittings categorized under PN-25 Types?

VIALLI fittings can withstand temperature above $95^{\circ} \mathrm{C}$ and pressure up to $25 \mathrm{~kg} / \mathrm{cm} 2$, (25 Bars) hence categorized under PN-25.

## Q: What does PN Stands for and what does it mean to be PN-16 or PN20?

PN stands for Nominal Pressure, it is numerical designation used for reference purpose related to mechanical characteristics of the component of a piping system. A PN-20 pipe mean the pipe can withstand pressure Up to 20 Bars.

## Q: What is the deference between PN16 and PN20 pipes due to the

application areas?

Life Span of PN20 is Longer than PN-16 pipes under the same temperature and pressure conditions. Especially for the exposed installations as the expansion of PN-20 pipes are $1 / 5$ of PN 16 pipes sagging and snaking problems are avoided.

## Q: How is pipe categorized as PN-10, PN-16, PN-20 \& PN25 matched with SDR (Standard Dimension Rate) of conventional pipes?

PP-Rc Pipes with all thickness of OD/ SDR is matched as the Equivalent PP-Rc Pipe for a SDR Pipe.<br>PN-10 is regarded as equivalent to SDR 11 Because, PN 10 Pipe of 20 mm OD has thickness approx. to $20 / 11=1.8$<br>PN-10 160 mm has thickness approx. to $160 / 11=14.55$<br>Likewise SDR 7.4 is matched as PN-16 and SDR 6 as PN-20.

## Q: What is the intended use of different classes of Pipes?

> PN 10 - Cold water distribution and floor heating systems
> PN 16 - Higher pressure cold water distribution and domestic hot water system at $\quad$ lower Pressures.
> PN 20 - hot water distribution Central
> PN 25 - Higher pressure Hot water distribution Central and Domestic

## Q: What should be done is somebody accidentally drills a hole on the pipe?

If it is a nail or a drill hole ( 10.5 mm deep max) you may use "VIALLLI PP-Rc Hole Repair Kit to repair the hole on the pipe. If the damage part of the pipe is not concealed yet (before the pressure test is conducted), the recommended procedure is to cut that part and replace it by a new part through normal welding of a socket.

## Q: Should any precaution be taken for the installation at low temperatures?

At lower temperature of $0^{\circ} \mathrm{C}$ and below, the flexibility of PP-Rc pipes reduces and impact strength also reduces. This makes pipes more prone to mechanical damages against impact loads. To avoid the damages at low temperature, it is advisable to insulate the pipe lines

## Q: Do VIALLI PP-Rc Piping systems burn?

VIALLI pipes and fittings have a combustion point of $330^{\circ} \mathrm{C}$ and a burning point of $360^{\circ} \mathrm{C}$. These properties conform to the B2 (Normally inflammable) class fire requirements for normal combustibility according to DIN 4102. In the event of a fire, PP-Rc pipes and fittings emit carbon dioxide and water. Additionally, depending on the availability of oxygen, small amounts of carbon monoxide gas, molecular hydrocarbons, and oxidation products may also be emitted. Even in cases of incomplete combustion, the materials emitted are less toxic than those from wood or conventional pipe systems under similar conditions.

## Q: How can the PP-Rc pipes \& fittings joined together?

The process of joining PP-Rc pipes and fittings is very simple and results in inseparable water joints. This is achieved using a straightforward welding machine that melts the internal surface of the fittings and the external surface of the pipe at $270^{\circ} \mathrm{C}$, allowing the material of the pipe and the fitting to meld together. Because both the pipes and fittings are produced from the same material, the connection is typically homogeneous.

## Q: Can the pipes alignment be adjusted after the welding process?

Alignment up to 5 degree relative to the axis of the pipe can be done immediately after jointing.

## Q: How is the pipe cutting recommended?

It is advised to used sharp cutting tools to cut the pipe with no burrs, VIALLI Provide cutting tools of size 20-40, 20-63, 50-110, 160, $200 \& 250$.

## Q: How is the size of pipes and fittings measured?

Pies size is measured by mm (millimeter) of its outer Dia. PRR fittings are measured by mm (millimeter) of inner dia. and metal threaded fittings treaded side size is measured in inches

## Q: Which is the metal used in manufacturing of VIALLI Threaded fittings?

VAILLI Threaded fittings are manufactured using stainless steel inserts, tin bronze inserts, brass with nickel platted inserts \& natural brass inserts and its threading is made as per British Standard Threading.

## Q: How can the stressing of pipe be avoided?

Possible linear thermal expansion/contraction needs to be taken into consideration during designing and installing. Stressing of pipes can be avoided by providing flexible free length and proper supporting.

## Q: Why is joining of pipes without using sockets un-recommended?

This joining results blockage or reduction in inner Dia. At joining point hence it's recommended to avoid as it can affect the function of the system.

## Q: Is joining of pipes \& fittings using glue recommended?

Using glue connections is not recommended as they cannot provide a 50 -year guarantee against leakages. Additionally, glue connections are susceptible to issues like termite attacks and frequent maintenance requirements, which can impact the hygienic and long-term performance of the VIALLI PP-Rc Pipe system.

## Q: How is pressure testing recommended?

Before any pipes are filled or cemented in concealed applications, they must undergo hydrostatic testing to check for pressure loss or leaks. The testing involves pressurizing the closed system, with all ends sealed using caps and pipe plugs, with water up to 25 bar for PN-20 and PN-25 pipes, and up to 15 bar for PN-16 pipes, all at room temperature. The pressure should be maintained for at least 8 hours to detect any pressure drop. This process is repeated to confirm the absence of even minor leaks. If a significant pressure drop is observed, the specific area of leakage must be identified and rectified.

## 10. VIALLI GLASS FIBER REINFORCED PIPE

## PRODUCT DESCRIPTION

FR-PPR Glass Fiber-reinforced hot and cold water composite pipes are three-layer co-extruded pipes. They are produced at low temperatures with high-speed production techniques and offer the special advantages of PP-Rc pipes. Additionally, they possess the following characteristics:

1. The linear expansion coefficient is only about 20-30\% of that of ordinary PP-Rc pipes.
2. Enhances pipe rigidity, prevents sagging, provides additional support points, and thereby reduces the total installation cost.
3. Higher pressure resistance level and longer working life under several working conditions. ( $95{ }^{\circ} \mathrm{C}$ at 10 bar for short time test 200 hours) $95^{\circ} \mathrm{C}$ at6.5 Bar for a service time 50 years.
4. Permanently solves the issue of oxygen ingress into the pipeline, ensuring that it does not appear on the inner surface. The middle layer of the FR-PPR pipe effectively prevents oxygen intrusion, inhibiting algae growth and maintaining fresh, pure water.
5. Exhibits good resistance to ultraviolet radiation, ensuring that the installation remains free from deformation.
6. Low thermal conductivity

* PP-Rc Aluminum composite pipe coefficient of thermal conductivity is 190w/mk
* PP-Rc Glass fiber composite pipe coefficient of thermal conductivity is $110 \mathrm{w} / \mathrm{mk}$ ideal choice for outdoor construction of solar and heat energy system.

Raw Material and Technical Specifications

* Pipe Type: PP-Rc Glass-Fiber Rain Forced
* Elongation coefficient: $0.035 \mathrm{~mm} / \mathrm{mk}$
* Fields of use: Heating, Cooling, internal and external cold and hot domestic water supply pipes system.

Liner Expansion Table for the VIALLI Composite Pipes

Amount of elongation ( $\Delta \mathrm{L}$ ) (mm) :

| length | $\Delta T$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 20 | 8 | 6 | 24 | 36 | 40 | 48 | 56 |

## 10. Vialli Glass Fiber Reinforced Pipe

## Product Description

Compares the amount of elongation from the glass fiber reinforcement PP-Rc pipe with the standard PP-Rc pipe

While fiberglass reinforced PP-Rc pipes elongate by 1.75 mm per 1 meter at a temperature difference of $50^{\circ} \mathrm{C}$, standard PP-Rc pipes elongate by 7.5 mm per 1 meter under the same temperature difference.

| Code | Measure | Packet |
| :---: | :---: | :---: |
| 107020 | $20 \times 3.4 \mathrm{~mm}$ | 100 |
| 107025 | $25 \times 4.2 \mathrm{~mm}$ | 100 |
| 107032 | $32 \times 5.4 \mathrm{~mm}$ | 60 |
| 107040 | $40 \times 6.7 \mathrm{~mm}$ | 40 |

## 11. Vialli Aluminum Reinforced Pipe

## Product Description

VIALLI PN25 pipes (with an aluminum layer) consist of inside and outside layers made of PPRc. These layers are securely bonded to the middle layer, which is an aluminum core, using a PP-based adhesive and are well-welded in an overlapping manner. This type of pipe represents a perfect combination of a metal pipe and a plastic pipe.

## Advantages

* Greatly reduces linear expansion coefficient, only $1 / 4$ of that of PP-Rc, which means the composite pipes have stable dimensions.
* 100\% Oxygen tightness, suitable for heating system.
* Improved resistance to impulse under low temperature, resistant to UV-rays.
* Works under High temperatures and pressures for cool and hot water systems.
* Easily detectable when embedded, due to the presence of the metal layer.
* Excellent heat preservation performance with a low thermal conductivity coefficient of $0.45 \mathrm{~W} / \mathrm{m} \cdot \mathrm{K}$.
* Smooth and hygienic, making it an excellent choice for drinkable water systems.

## Advantages

\% Suitable for the distribution of both cold and hot water.

* Pipes for a variety of high-temperature and low-temperature heating systems.
* Pipes for heating and cooling settings in solar energy systems.
* Ductfor drinkable water system.
* Industrial transportation for chemical liquids.
* Pipes for connecting air conditioners.
* High-pressure pipes for irrigation systems.

## 12. Fittings inserts

The durability of fittings is significantly influenced by their resistance to corrosion. Hence, we utilize various types of metal inserts in the manufacturing of male and female VIALLI fittings, as elaborated below.

### 12.1 Stainless Steel Inserts

* Vialli Stainless Steel Fittings have low Interior surface friction, remain stable under extreme temperatures.
* Vialli Stainless Steel Fittings like the ones link plus installs to be among the most Durable option available
* The standard for producing Vialli Stainless Steel PP-Rc Fittings DIN 17440 and DIN 17441
* Life Span for Vialli Stainless Steel PP-Rc fittings under Marin environment 3550 Years

### 12.2 Tin Bronze Inserts

* Excellent properties of Copper-Tin alloys-Gun Metal- of Vialli Bronze PP-Rc Fittings.
* All Bronze Inserts with the following Technical Specifications $\left(\mathrm{CuSn}_{5} \mathrm{Zn}_{5} \mathrm{~Pb}_{5}-\mathrm{C}\right)$, (CuSn $\left.\mathrm{Zu}_{5} \mathrm{~Pb}_{2}-\mathrm{C}\right)$
* The lifeSpanof the Vialli Tin Bronze Fittings under Marine Environmentsis approximately $30-45$ years.

### 12.3 DZR Brass Chrome Platted

* VIALLI DZR Brass Chrome Plated PP-Rc fittings are widely used globally, known for their high quality and competitive pricing.
* The VIALLI DZR Brass Chrome-plated PP-Rc Fittings come with the following technical specifications: (CuZn39 Pb2), (CuZn39 Pb3), (CuZn40 Pb2).
* The Surface Treatment Chrome Plated as Per DIN 259 and BS 2779
* The life Span for Vialli DZR Brass Chrome plated Fittings is approximately 2535 years.

### 12.4 Natural Brass Insert

\% VIALLI Natural Brass fittings are produced with technical specific ations similar to Brass with Nickel Plating but without undergoing any surface treatment.

* It represents a less durable alternative.
* Life Span for Vialli Natural Brass PP-Rc Fittings under Marine Environmentsis approximately 15-20 years.

## 13. INSTALLATION RECOMMENDATIONS

* Handling the VIALLI installation system does not fundamentally differ from the installation scheme for metallic pipes.
* Fittings and fixtures commonly used in the trade, as well as insulation materials in accordance with heating installation regulations, may be applied in the traditional manner.
* The planning and execution of drinking water systems are conducted in compliance with DIN 1988, which encompasses the "Technical Regulations on Drinking Water Systems."
* It can be used in mixed systems, for example, during repair work without any issues.
* The minimal number of tools needed simplifies the handling of the entire system.

Owing to the extensive fitting programmed, appropriate molded parts are required for each mode of installation,e.g. wall installations are available.

- Connecting with existing VIALLI systems can be seamlessly accomplished using welding saddles.
* Installations elements subject to frequent use can be pre-assembled (welded)in the workshop.

```
To make sure that our system is installed in a professional manner, the following recommendation should be observed:
```

* Avoid the presence of bubbles inside the piping.
* Install piping in an upward direction towards the tapping point.
* Place aerators and ventilation devices at the upper end of the ascending part of the line and evacuation points at the lower end.
* Mount separate cut-offs for ascending phases, apartment piping, pressure risers, hot water boilers, and garden piping.
* Always secure pipe fittings with inserts to prevent sound transmission.
* Avoid contact with structural elements when passing pipes through walls and ceilings to eliminate sound transmission.
* Account for pipe elongation when welding, as welding at outdoor temperatures below $0^{\circ} \mathrm{C}$ is possible only under specific conditions.

## Welding Operations

1.) Cut the pipe perpendicular to its axis
2.) Heating the pipe and the filling simultaneously.

3.) Within the allowed time interval, connect the pipe and Fitting (do not twist)
4.) Ensure that the pipe and fittings are joined with a welding process that is $100 \%$ secure.

Recommended values for welding of PP-Rc pipe at an outdoor temperature of $20^{\circ} \mathrm{C}$ \&medium air movement (time Requirement)

## PP-Rc PRODUCTS

Our products include PP-Rc pipes designed for indoor cold and hot water distribution systems, floor and central heating systems, air distribution systems, and various applications in industry and agriculture. The lightweight nature of our pipes, coupled with their ease of processing, ensures quick, straightforward, and safe installations. Our welding concept, combined with the low roughness of the internal surface, contributes significantly to minimizing pressure losses in piping distribution systems.

## 1.) SDR 7.4 PP-Rc Pipes (Single Layer)

Our 4 m pipes, designed for the highest pressure range, are ideal for hot water distribution systems, including applications in high-rise buildings, apartments, and panel buildings. Their exceptional chemical resistance makes them wellsuited for use in industrial and agricultural facilities. These pipes are equivalent to PN 16with a safety factor of 1.5 , ensuring their durability and reliability in demanding environments.

| Size (D) | Inner Dia. | SDR | (S) Wall <br> Thickness |
| :---: | :---: | :---: | :---: |
| 20 mm | 14.4 mm | 7.4 | 2.8 mm |
| 25 mm | 18.0 mm | 7.4 | 3.5 mm |
| 32 mm | 23.2 mm | 7.4 | 4.4 mm |
| 40 mm | 29.0 mm | 7.4 | 5.5 mm |
| 50 mm | 36.2 mm | 7.4 | 6.9 mm |
| 63 mm | 45.8 mm | 7.4 | 8.6 mm |
| 75 mm | 54.4 mm | 7.4 | 10.3 mm |
| 90 mm | 65.4 mm | 7.4 | 12.3 mm |
| 110 mm | 79.8 mm | 7.4 | 15.1 mm |
| 125 mm | 90.8 mm | 7.4 | 17.1 mm |
| 160 mm | 116.2 mm | 7.4 | 21.9 mm |
| 200 mm | 153.6 mm | 9 | 23.2 mm |
| 250 mm | 195.4 mm | 9 | 27.3 mm |

## 2.) SDR 6 PP-Rc Pipes (Single Layer)

Our 4 m pipes, designed for the highest pressure range, are perfectly suited for hot water distribution systems, including applications in high-rise buildings, apartments, and panel buildings. Their exceptional chemical resistance makes them an ideal choice for use in industrial and agricultural plants. These pipes are equivalent to PN 20 with a safety factor of 1.5, ensuring their reliability and safety in demanding environments.

| Size (D) | Inner Dia. | SDR | (S) Wall <br> Thickness |
| :---: | :---: | :---: | :---: |
| 20 mm | 13.2 mm | 6 | 3.4 mm |
| 25 mm | 16.6 mm | 6 | 4.2 mm |
| 32 mm | 21.2 mm | 6 | 5.4 mm |
| 40 mm | 26.6 mm | 6 | 6.7 mm |
| 50 mm | 33.2 mm | 6 | 8.4 mm |
| 63 mm | 42.0 mm | 6 | 10.5 mm |
| 75 mm | 50.0 mm | 6 | 12.5 mm |
| 90 mm | 60.0 mm | 6 | 15 mm |

| 125 mm | 83.4 mm | 6 | 20.8 mm |
| 160 mm | 106.4 mm | 6 | 26.6 mm |
| 200 mm | 143.4 mm | 7.4 | 28.3 mm |
| 250 mm | 183.0 mm | 7.4 | 33.3 mm |

## 3.) SDR 7.4 Multilayer PP-Rc Pipes (Fiber Glass Layer)

Our 4 m pipes are well-suited for hot water distribution systems in locations with lower ceilings, as well as for heating and cooling water distribution systems in hot water heating systems or air conditioning systems. These pipes are designed to have low thermal expansion and high stiffness, making them ideal for such applications. The installation of these pipes does not require the use of any supporting gutters. They are equivalent to PN 20with a safety factor of 1.5, ensuring their durability and reliability.

| Size (O.D) | d.i | SDR | Wall <br> Thickness |
| :---: | :---: | :---: | :---: |
| 20 mm | 14.4 mm | 7.4 | 2.8 mm |
| 25 mm | 18.0 mm | 7.4 | 3.5 mm |
| 32 mm | 23.2 mm | 7.4 | 4.4 mm |
| 40 mm | 29.0 mm | 7.4 | 5.5 mm |
| 50 mm | 36.2 mm | 7.4 | 6.9 mm |
| 63 mm | 45.8 mm | 7.4 | 8.6 mm |
| 75 mm | 54.4 mm | 7.4 | 10.3 mm |
| 90 mm | 65.4 mm | 7.4 | 12.3 mm |
| 110 mm | 79.8 mm | 7.4 | 15.1 mm |

## 4.) SDR 6 Multilayer PP-Rc Pipes (Fiber Glass Layer)

Our universal 4 m pipe is designed to meet the demands of the most challenging drinking, cooling, and heating water distribution systems. It offers the advantage of having thermal expansion four times lower than that of a standard PP-RC pipe while maintaining high stiffness it can be welded just like a common PP-RC pipe. This pipe is ideal for basic distribution systems, including hot water heating systems, and floor heating systems. These pipes are equivalent to PN 25 with a safety factor of 1.5.

| Size (O.D) | d.i | SDR | Wall <br> Thickness |
| :---: | :---: | :---: | :---: |
| 20 mm | 13.2 mm | 6 | 3.4 mm |
| 25 mm | 16.6 mm | 6 | 4.2 mm |
| 32 mm | 21.2 mm | 6 | 5.4 mm |
| 40 mm | 26.6 mm | 6 | 6.7 mm |
| 50 mm | 33.2 mm | 6 | 8.4 mm |
| 63 mm | 42.0 mm | 6 | 10.5 mm |
| 75 mm | 50.0 mm | 6 | 12.5 mm |
| 90 mm | 60.0 mm | 6 | 15 mm |
| 110 mm | 73.2 mm | 6 | 18.4 mm |
| 125 mm | 83.4 mm | 6 | 20.8 mm |
| 160 mm | 106.4 mm | 6 | 26.6 mm |
| 200 mm | 143.4 mm | 7.4 | 28.3 mm |
| 250 mm | 183.0 mm | 7.4 | 33.3 mm |

## 5.) SDR 6 Multilayer PP-Rc Pipes (Aluminum Layer)

Our 4 m pipe is ideal for hot water distribution systems in locations with lower ceilings, as well as for heating and cooling water distribution systems in hot water heating systems or air conditioning systems. These pipes offer the advantages of low thermal expansion and high stiffness, making them suitable for various applications. Additionally, there is no need to use any supporting gutters during installation. These pipes are equivalent to PN 25 with a safety factor of 1.5, ensuring their reliability and performance in demanding scenarios.

| Size (O.D) | d.i | SDR | Wall <br> Thickness |
| :---: | :---: | :---: | :---: |
| 20 mm | 13.2 mm | 6 | 3.4 mm |
| 25 mm | 16.6 mm | 6 | 4.2 mm |
| 32 mm | 21.2 mm | 6 | 5.4 mm |
| 40 mm | 26.6 mm | 6 | 6.7 mm |
| 50 mm | 33.2 mm | 6 | 8.4 mm |
| 63 mm | 42.0 mm | 6 | 10.5 mm |
| 75 mm | 50.0 mm | 6 | 12.5 mm |
| 90 mm | 60.0 mm | 6 | 15 mm |
| 110 mm | 73.2 mm | 6 | 18.4 mm |

## 6.) Coupling (Equal Socket)

Our piping systems allow for easy interconnection of individual pipes within a water or heating distribution system, minimizing pressure loss.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Equal Socket | 201020 |
| 25 mm | Equal Socket | 201025 |
| 32 mm | Equal Socket | 201032 |
| 40 mm | Equal Socket | 201040 |
| 50 mm | Equal Socket | 201050 |
| 63 mm | Equal Socket | 201063 |
| 75 mm | Equal Socket | 201075 |
| 90 mm | Equal Socket | 201090 |
| 110 mm | Equal Socket | 201110 |
| 125 mm | Equal Socket | 201125 |
| 160 mm | Equal Socket | 201160 |
| 200 mm | Equal Socket | 201200 |
| 250 mm | Equal Socket | 201250 |

## 7.) Equal Tee

Our fittings facilitate the branching of a distribution system while ensuring that the inside diameter of the fittings remains unchanged compared to the inside diameter of the piping. As a result, these fittings do not signific antly increase the pressure loss in the distribution system.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| $20 \times 20 \times 20 \mathrm{~mm}$ | Equal Tee | 208020 |
| $25 \times 25 \times 25 \mathrm{~mm}$ | Equal Tee | 208025 |
| $32 \times 32 \times 32 \mathrm{~mm}$ | Equal Tee | 208032 |
| $40 \times 40 \times 40 \mathrm{~mm}$ | Equal Tee | 208040 |
| $50 \times 50 \times 50 \mathrm{~mm}$ | Equal Tee | 208050 |
| $63 \times 63 \times 63 \mathrm{~mm}$ | Equal Tee | 208063 |
| $75 \times 75 \times 75 \mathrm{~mm}$ | Equal Tee | 208075 |
| $90 \times 90 \times 90 \mathrm{~mm}$ | Equal Tee | 208090 |
| $110 \times 110 \times 110 \mathrm{~mm}$ | Equal Tee | 208110 |
| $125 \times 125 \times 125 \mathrm{~mm}$ | Equal Tee | 208125 |
| $160 \times 160 \times 160 \mathrm{~mm}$ | Equal Tee | 208160 |
| $200 \times 200 \times 200 \mathrm{~mm}$ | Equal Tee | 208200 |
| $250 \times 250 \times 250 \mathrm{~mm}$ | Equal Tee | 208250 |

## 8.) Reducer Socket

Reduces interconnection of individual pipes within a water or heating distribution system, resulting in reduced pressure loss.

| Size (D1, D2) | Description | Art. No. |
| :---: | :---: | :---: |
| $25 / 20 \mathrm{~mm}$ | Reducer Socket | 209025020 |
| $32 / 20 \mathrm{~mm}$ | Reducer Socket | 209032020 |
| $32 / 25 \mathrm{~mm}$ | Reducer Socket | 209032025 |
| $40 / 20 \mathrm{~mm}$ | Reducer Socket | 209040020 |
| $40 / 25 \mathrm{~mm}$ | Reducer Socket | 209040025 |
| $40 / 32 \mathrm{~mm}$ | Reducer Socket | 209040032 |
| $50 / 25 \mathrm{~mm}$ | Reducer Socket | 209050025 |
| $50 / 32 \mathrm{~mm}$ | Reducer Socket | 209050032 |
| $50 / 40 \mathrm{~mm}$ | Reducer Socket | 209050040 |
| $63 / 25 \mathrm{~mm}$ | Reducer Socket | 209063025 |
| $63 / 32 \mathrm{~mm}$ | Reducer Socket | 209063032 |
| $63 / 40 \mathrm{~mm}$ | Reducer Socket | 209063040 |
| $63 / 50 \mathrm{~mm}$ | Reducer Socket | 209063050 |
| $75 / 50 \mathrm{~mm}$ | Reducer Socket | 209075050 |
| $75 / 63 \mathrm{~mm}$ | Reducer Socket | 209075063 |

## Reducer Socket

Reduces interconnection of individual pipes within a water or heating distribution system, resulting in reduced pressure loss.

| Size (D1, D2) | Description | Art. No. |
| :---: | :---: | :---: |
| $75 / 63 \mathrm{~mm}$ | Reducer Socket | 209075063 |
| $90 / 63 \mathrm{~mm}$ | Reducer Socket | 209090063 |
| $90 / 75 \mathrm{~mm}$ | Reducer Socket | 209090075 |
| $110 / 90 \mathrm{~mm}$ | Reducer Socket | 2090110090 |
| $125 / 110 \mathrm{~mm}$ | Reducer Socket | 20901250110 |
| $160 / 110 \mathrm{~mm}$ | Reducer Socket | 20901600110 |
| $160 / 125 \mathrm{~mm}$ | Reducer Socket | 20901600125 |
| $160 / 50 \mathrm{~mm}$ | Reducer Socket | 2090160050 |
| $160 / 75 \mathrm{~mm}$ | Reducer Socket | 2090160075 |
| $160 / 90 \mathrm{~mm}$ | Reducer Socket | 2090160090 |
| $200 / 90 \mathrm{~mm}$ | Reducer Socket | 2090200090 |
| $200 / 110 \mathrm{~mm}$ | Reducer Socket | 20902000110 |
| $200 / 160 \mathrm{~mm}$ | Reducer Socket | 20902000160 |
| $250 / 160 \mathrm{~mm}$ | Reducer Socket | 20902500160 |
| $250 / 200 \mathrm{~mm}$ | Reducer Socket | 2090250200 |

9.) Elbow $90^{\circ}$

A simple, reliable fitting used to change the direction of a Distribution system. When installed properly it increases the Pressure loss in the distribution system noticeably less than Elbows in other distribution systems. Thanks to the full-size InsideDiameter corresponding to that of the piping.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Elbow $90^{\circ}$ | 202020 |
| 25 mm | Elbow $90^{\circ}$ | 202025 |
| 32 mm | Elbow $90^{\circ}$ | 202032 |
| 40 mm | Elbow $90^{\circ}$ | 202040 |
| 50 mm | Elbow $90^{\circ}$ | 202050 |
| 63 mm | Elbow $90^{\circ}$ | 202063 |
| 75 mm | Elbow $90^{\circ}$ | 202075 |
| 90 mm | Elbow $90^{\circ}$ | 202090 |
| 110 mm | Elbow $90^{\circ}$ | 202110 |
| 125 mm | Elbow $90^{\circ}$ | 202125 |
| 160 mm | Elbow $90^{\circ}$ | 202160 |
| 200 mm | Elbow $90^{\circ}$ | 202200 |
| 250 mm | Elbow $90^{\circ}$ | 202250 |

## 10.) Elbow $45^{\circ}$

A simple, reliable fitting used to change the direction of a DistributionSystem. When installed properly, it increases the pressure loss in the distribution system noticeably less than elbows in other distribution systems, thanks to the full-size inside diametercorresponding to that of the piping.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Elbow $45^{\circ}$ | 203020 |
| 25 mm | Elbow $45^{\circ}$ | 203025 |
| 32 mm | Elbow $45^{\circ}$ | 203032 |
| 40 mm | Elbow $45^{\circ}$ | 203040 |
| 50 mm | Elbow $45^{\circ}$ | 203050 |
| 63 mm | Elbow $45^{\circ}$ | 203063 |
| 75 mm | Elbow 45 | 203075 |
| 90 mm | Elbow 45 | 203090 |
| 110 mm | Elbow 45 | 203110 |
| 125 mm | Elbow $45^{\circ}$ | 203125 |
| 160 mm | Elbow 45 | 203160 |
| 200 mm | Elbow $45^{\circ}$ | 203200 |
| 250 mm | Elbow $45^{\circ}$ | 203250 |

## 11.) Reducer Tee

A fitting allowing for the branching of a distribution system. The Inside diameter of the fitting is not reduced compared to the Inside diameter of the piping, and therefore, the fitting dose not Significantly increase the pressure loss in the distribution system.

| Size (D1, D2) | Description | Art. No. |
| :---: | :--- | :---: |
| $25 \times 20 \times 25 \mathrm{~mm}$ | Reducer Tee | 212025020 |
| $32 \times 25 \times 32 \mathrm{~mm}$ | Reducer Tee | 212032025 |
| $32 \times 20 \times 32 \mathrm{~mm}$ | Reducer Tee | 212032020 |
| $40 \times 20 \times 40 \mathrm{~mm}$ | Reducer Tee | 212040020 |
| $40 \times 25 \times 40 \mathrm{~mm}$ | Reducer Tee | 212040025 |
| $40 \times 32 \times 40 \mathrm{~mm}$ | Reducer Tee | 212040032 |
| $50 \times 25 \times 50 \mathrm{~mm}$ | Reducer Tee | 212050025 |
| $50 \times 32 \times 50 \mathrm{~mm}$ | Reducer Tee | 212050032 |
| $63 \times 25 \times 63 \mathrm{~mm}$ | Reducer Tee | 212063025 |
| $63 \times 32 \times 63 \mathrm{~mm}$ | Reducer Tee | 212063032 |
| $63 \times 40 \times 63 \mathrm{~mm}$ | Reducer Tee | 212063040 |
| $63 \times 50 \times 63 \mathrm{~mm}$ | Reducer Tee | 212063050 |
| $75 \times 25 \times 75 \mathrm{~mm}$ | Reducer Tee | 212075025 |
| $75 \times 32 \times 75 \mathrm{~mm}$ | Reducer Tee | 212075032 |
| $75 \times 40 \times 75 \mathrm{~mm}$ | Reducer Tee | 212075040 |
| $75 \times 50 \times 75 \mathrm{~mm}$ | Reducer Tee | 212075050 |
| $75 \times 63 \times 75 \mathrm{~mm}$ | Reducer Tee | 212075063 |

Reducer Tee

| Size (D1, D2) | Description | Art. No. |
| :---: | :--- | :---: |
| $90 \times 40 \times 90 \mathrm{~mm}$ | Reducer Tee | 212090040 |
| $90 \times 50 \times 90 \mathrm{~mm}$ | Reducer Tee | 212090050 |
| $90 \times 63 \times 90 \mathrm{~mm}$ | Reducer Tee | 212090063 |
| $90 \times 75 \times 90 \mathrm{~mm}$ | Reducer Tee | 212090075 |
| $110 \times 40 \times 110 \mathrm{~mm}$ | Reducer Tee | 212110040 |
| $110 \times 50 \times 110 \mathrm{~mm}$ | Reducer Tee | 212110050 |
| $110 \times 63 \times 110 \mathrm{~mm}$ | Reducer Tee | 212110063 |
| $110 \times 75 \times 110 \mathrm{~mm}$ | Reducer Tee | 212110075 |
| $110 \times 90 \times 110 \mathrm{~mm}$ | Reducer Tee | 212110090 |
| $125 \times 110 \times 125 \mathrm{~mm}$ | Reducer Tee | 2121250110 |
| $160 \times 110 \times 160 \mathrm{~mm}$ | Reducer Tee | 2121600110 |
| $160 \times 25 \times 160 \mathrm{~mm}$ | Reducer Tee | 212160025 |
| $160 \times 40 \times 160 \mathrm{~mm}$ | Reducer Tee | 212160040 |
| $160 \times 50 \times 160 \mathrm{~mm}$ | Reducer Tee | 212160050 |
| $160 \times 63 \times 160 \mathrm{~mm}$ | Reducer Tee | 212160063 |
| $160 \times 75 \times 160 \mathrm{~mm}$ | Reducer Tee | 212160075 |
| $160 \times 90 \times 160 \mathrm{~mm}$ | Reducer Tee | 212160090 |

## 12.) End cap

A permanent or temporary end of a branch of a water or heating Distribution system. Fully corresponding to the pressure range.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | End Cap | 229020 |
| 25 mm | End Cap | 229025 |
| 32 mm | End Cap | 229032 |
| 40 mm | End Cap | 229040 |
| 50 mm | End Cap | 229050 |
| 63 mm | End Cap | 229063 |
| 75 mm | End Cap | 229075 |
| 90 mm | End Cap | 229090 |
| 110 mm | End Cap | 229110 |
| 125 mm | End Cap | 229125 |
| 160 mm | End Cap | 229160 |

## 13.) Pipe Bridge

Allows for crossing of individual tracks of a water and HeatingDistribution system. It is most often used for distribution systems inFloor or when avoiding vertical pipes.

| Size (D) | Description | Art. No. |
| :---: | :--- | :--- |
| 20 mm | Pipe Bridge | 233020 |
| 25 mm | Pipe Bridge | 233025 |
| 32 mm | Pipe Bridge | 233032 |

## 14.) Female Adaptor

A fitting used for the transition from a welded part a water or Heating distribution system to brass screw joints and threaded Fittings.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| $20 \times 1 /{ }^{\prime \prime \prime}$ | Female Adaptor | 217020 |
| $25 \times 1 / 2^{\prime \prime}$ | Female Adaptor | 217025 |
| $25 \times 3 / 4^{\prime \prime}$ | Female Adaptor | 217025 |
| $32 \times 1^{\prime \prime}$ | Female Adaptor | 217032 |
| $40 \times 1 / 1^{\prime \prime}$ | Female Adaptor | 217040 |
| $50 \times 1 / 2^{\prime \prime}$ | Female Adaptor | 217050 |
| $63 \times 2^{\prime \prime}$ | Female Adaptor | 217063 |
| $75 \times 2^{\prime 1 / 2 \prime}$ | Female Adaptor | 217075 |
| $90 \times 3^{\prime \prime}$ | Female Adaptor | 217090 |
| $110 \times 4^{\prime \prime}$ | Female Adaptor | 217110 |

## 15.) Male Adaptor

A fitting used for the transition from a welded part of a water or heating distribution system to brass screw joints and ThreadedFittings.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20x $1 / 2^{\prime \prime}$ | Male Adaptor | 215020 |
| $25 \times 1 / 2 \prime$ | Male Adaptor | 215025 |
| $25 \times 3 / 4 \prime$ | Male Adaptor | 215025 |
| $32 \times 1$ " | Male Adaptor | 215032 |
| $40 \times 11 / 4^{\prime \prime}$ | Male Adaptor | 215040 |
| $50 \times 11 / 2^{\prime \prime}$ | Male Adaptor | 215050 |
| $63 \times 2$ " | Male Adaptor | 215063 |
| $75 \times 21 / 2^{\prime \prime}$ | Male Adaptor | 215075 |
| 90x 3" | Male Adaptor | 215090 |
| $110 \times 4$ " | Male Adaptor | 215110 |

## 16.) Female Elbow $90^{\circ}$

A fitting used for the transition from a welded part of a water or heating distribution system to brass screw joints and threaded fittings.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| $20 \times 1 / 2^{\prime \prime}$ | Female Elbow | 218020 |
| $25 \times 1 / 2^{\prime \prime}$ | Female Elbow | 218026 |
| $25 \times 3 / 4 \prime \prime$ | Female Elbow | 218025 |
| $32 \times 1 / 2^{\prime \prime}$ | Female Elbow | 208036 |
| $32 \times 3 / 4^{\prime \prime}$ | Female Elbow | 208035 |
| $32 \times 1^{\prime \prime}$ | Female Elbow | 218032 |

## 17.) Female Tee

A fitting used for the transition from a welded part of a water or Heating distribution system to brass screw joints and threaded Fittings.

| Size (D) | Description | Art. No. |
| :---: | :--- | :--- |
| $20 \times 1 / 2^{\prime \prime} \times 20$ | Female Tee | 222020 |
| $25 \times 1 / 2 \times 25$ | Female Tee | 222026 |
| $25 \times 3 / 4^{\prime \prime} \times 25$ | Female Tee | 222025 |
| $32 \times 1 / 2 \times 32$ | Female Tee | 222036 |
| $32 \times 3 / 4^{\prime \prime} \times 32$ | Female Tee | 222035 |
| $32 \times 1^{\prime \prime} \times 32$ | Female Tee | 222032 |
| $40 \times 1 / 2^{\prime \prime} \times 40$ | Female Tee | 222040 |

## 18.) Female Union

A fitting used for the transition from a welded part of a water or Heating distribution system to brass screw joints and threaded fittings.

| Size (D) | Description | Art. No. |
| :---: | :---: | :--- |
| $20 \times 1 / 2^{\prime \prime}$ | Female Union | 236020 |
| $25 \times 3 / 4^{\prime \prime}$ | Female Union | 236025 |
| $32 \times 1^{\prime \prime}$ | Female Union | 236032 |
| $40 \times 1 \frac{1}{4 \prime \prime}$ | Female Union | 236040 |
| $50 \times 1 \frac{1}{2 \prime \prime}$ | Female Union | 236050 |
| $63 \times 2^{\prime \prime}$ | Female Union | 236063 |

19.) Male Union

A fitting used for transition from a welded part of a water orHeating distribution system to brass screw joints and threaded
fittings.

| Size (D) | Description | Art. No. |
| :---: | :--- | :--- |
| $20 \times 1 / 2^{\prime \prime}$ | Male Union | 237020 |
| $25 \times 3 / 4^{\prime \prime}$ | Male Union | 237025 |
| $32 \times 1^{\prime \prime}$ | Male Union | 237032 |
| $40 \times 11 / 4^{\prime \prime}$ | Male Union | 237040 |
| $50 \times 11 / 2^{\prime \prime}$ | Male Union | 237050 |
| $63 \times 2^{\prime \prime}$ | Male Union | 237063 |

## 20.) Union Socket - Metal

A fitting used for the transition from a welded part of a water or Heating distribution system to brass screw joints and threaded fittings.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Union Socket | 238020 |
| 25 mm | Union Socket | 238025 |
| 32 mm | Union Socket | 238032 |
| 40 mm | Union Socket | 238040 |
| 50 mm | Union Socket | 238050 |
| 63 mm | Union Socket | 238063 |

## 21.) Stainless Steel Non-Rising Stem Valve

Our straight-way plastic valve not only allows for the closure of a distribution system but also enables partial flow regulation in specific sections. With proper operation and maintenance, the replacement parts ensure an almost endless service life.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | S.S Non-Rising Stem Valve | 304020 |
| 25 mm | S.S Non-Rising Stem Valve | 304025 |
| 32 mm | S.S Non-Rising Stem Valve | 304032 |
| 40 mm | S.S Non-Rising Stem Valve | 304040 |
| 50 mm | S.S Non-Rising Stem Valve | 304050 |
| 63 mm | S.S Non-Rising Stem Valve | 304063 |

## 22.) Chrome Plated Valve

An elegant concealed valve for closing branches of a DistributionSystem, intended for premises with higher aesthetic requirementsSuch as bathrooms, toilet rooms and wash rooms.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Chrome Plated Valve | 322020 |
| 25 mm | Chrome Plated Valve | 322025 |
| 32 mm | Chrome Plated Valve | 322032 |

## 23.) Pipe Clamp

PP-Rc system accessory for fastening pipes.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Pipe Clamp | 901020 |
| 25 mm | Pipe Clamp | 901025 |
| 32 mm | Pipe Clamp | 901032 |
| 40 mm | Pipe Clamp | 901040 |

## 24.) Test Plug

Temporary closure of threaded fittings in water or heating Distribution systems. It is used especially for blank wallMounted Tee fittings.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| $1 / 2^{\prime \prime}$ | Test Plug | 91403 |

## 25.) Flange set

A fitting and steel flange used for the transition from a welded part of a water or Heating distribution system to flange dismountable joints.

| Size (D) | Description | Art. No. |
| :---: | :---: | :---: |
| 32 mm | Flange Set | 231032 |
| 40 mm | Flange Set | 231040 |
| 50 mm | Flange Set | 231050 |
| 63 mm | Flange Set | 231063 |
| 75 mm | Flange Set | 231075 |
| 90 mm | Flange Set | 231090 |
| 110 mm | Flange Set | 231110 |
| 125 mm | Flange Set | 231125 |
| 160 mm | Flange Set | 231160 |
| 200 mm | Flange Set | 231200 |
| 250 mm | Flange Set | 231250 |

## 26.) Welding Socket

To connect pipes to valves, fittings, or other pipe sections, it is recommended to use fillet-type seal welds. Socket welded joints construction is an excellent choice, especially when high leakage integrity and exceptional structural strength are critical design considerations.

| Size | Description | Art. No. |
| :---: | :---: | :---: |
| 20 mm | Welding Socket | 20 |
| 25 mm | Welding Socket | 25 |
| 32 mm | Welding Socket | 32 |
| 40 mm | Welding Socket | 40 |
| 50 mm | Welding Socket | 50 |
| 63 mm | Welding Socket | 63 |
| 75 mm | Welding Socket | 75 |
| 90 mm | Welding Socket | 90 |
| 110 mm | Welding Socket | 110 |
| 125 mm | Welding Socket | 125 |
| 160 mm | Welding Socket | 160 |
| 200 mm | Welding Socket | 200 |
| 250 mm | Welding Socket | 250 |

## 27.) Pipe Cuter

A pipe cutter is a type of tool used by plumber to cut pipes. besides producing a clean cut, the tool is often a faster, cleaner, and moreconvenient way of cutting pipe

| Size | Description | Art. No. |
| :---: | :---: | :---: |
| $16-40 \mathrm{~mm}$ | Pipe Cuter | 91411 |
| $50-250 \mathrm{~mm}$ | Special Pipe <br> Cuter | 91412 |

## 28.) Welding Machine Set

Our PP-Rc Pipe Welding Machine is designed for welding PP-Rc pipes and fittings. It features a highquality PTFE non-stick coating, ensuring smooth and efficient welding operations.

| Size | Description | Art. No. |
| :---: | :---: | :---: |
| $20-32 \mathrm{~mm}$ | Welding Machine | 91421 |
| $40-110 \mathrm{~mm}$ | Welding Machine | 91422 |

## 29.) Adjustable Welding Machine Set

Our PP-Rc Pipe Welding Machine is specifically designed for welding PP-Rc pipes and fittings. It is equipped with a high-quality PTFE non-stick coating, ensuring smooth and efficient welding operations.

| Size | Description | Art. No. |
| :---: | :---: | :---: |
| $125-250 \mathrm{~mm}$ | Welding Machine | 91423 |
